

ZAware provides on-demand visibility into the steady state operations of a protected domain. Comparison reports track environmental changes, identifying anomalies and potential vulnerabilities.

Asset visibility is a foundational core tenant of Zero Trust. Defending any domain requires a complete view of every asset and every connection associated with those assets. One of the most significant challenges for security professionals is comprehending their network complexity. Without this understanding, the ability to granularly manage assets and their connections is nearly impossible. ZAware provides the visibility to quickly understand the entities and interactions in your environment. This provides the necessary foundation for the journey towards Zero Trust.

Product Overview

Provides a non-disruptive comprehensive view of your operating environment. Requires no changes to existing hardware/software configuration. Simply upload a standard PCAP and receive intuitive analytics providing clear and vital information.

Scale to your needs. A single instance can create a detailed system inventory. Repeated analysis provides trend analysis and potential anomaly identification.

Value Proposition

- A complete view of your network interactions and inventory
- Agentless implementation requires no changes to existing solutions
- Clear, informative and actionable reports
- Multiple acquisition options- from single use to unlimited annual subscription

The journey to Zero Trust

Visibility

Network inventory and connections (ZAware)

Analysis

Network behavior and interactions (ZAlert)

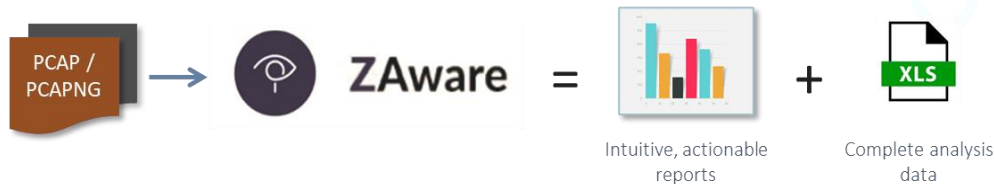

Action

3rd party integration real time response (ZProtect)

“Intuitive and highly informative”

Complete Network Visibility

- Complete inventory of connections, devices, protocols, manufacturers
- Change tracking: trends, connections, anomalies
- Fully outsourced capability
- No changes required to hardware or applications

“We found thousands of ports that we would not have known of otherwise.”

- Financial Services CIO

Exclusively Focused on Zero Trust Solutions for Cybersecurity and Operational Environments

“StealthPath’s model will save us two years in our mandated move to Zero Trust”

- DOD

Staged adoption path aligned to the proprietary Zero Trust Capability Model
